

Active Directory Conduit

Keep Corporate Outlook Contacts Up-to-Date

Employee data is often in multiple systems—an HR system and Microsoft Active Directory repository. Employee data updates require redundant entry efforts by both HR and IT.

Active Directory Conduit automatically populates attributes from Sage Abra's database into the Active Directory data store. Data discrepancies and wasted effort re-entering data are eliminated.

Key Features

- Standard installation as a Windows® service
- User designated synchronization times
- User-configurable attributes
- Critical events logging to the Windows Application Event log
- Configurable logging detail
- Single configurable file
- Developed using Microsoft® .NET Framework 3.5

Performance

- First full synchronization processes approximately 300 employee records per minute
- Subsequent synchronizations process about 2000 employee records per minute

Benefits

- **Synchronize Active Directory**
Automatically update Active Directory with changes to employee data in Sage Abra HRMS.
- **Increase Efficiency**
Active Directory Conduit runs as a scheduled service freeing IT to focus on more productive activities.
- **Easy Setup**
Setup is as easy as updating an XML file that maps the fields from Sage Abra to LDAP.
- **Streamline Termination Process**
No need to remember to deactivate accounts. Active Directory Conduit can deactivate terminated employee accounts automatically.
- **Increase Accuracy**
Active Directory Conduit keeps all the data stored in LDAP up-to-date and as accurate as the official employee records in Sage Abra.
- **Available with:**
Sage Abra HRMS
Sage Abra Suite
Sage Accpac HRMS

System Requirements

- **Operating Systems**
Windows Server® 2003 or later
- **Directory Server**
Active Directory® (included in Windows Server 2003 and later)
- **Database**
SQL Server® 2000 or later
SQL Express
- **Email Server**
Microsoft® Exchange Server 2003 or later
- **Platform Software**
Microsoft® .NET Framework 3.5

Limitations

- Active Directory records are never created, just updated.
- Active Directory records can be marked disabled automatically, but cannot be re-enabled automatically.
- Synchronization is performed at periodic intervals as per the parameters in the configuration file.
- Updates are not automatically triggered based on updates to the database.
